

Website Work Report

Everything built and fixed on the Trendy Bazaar website in this round of work

Date: 4 October 2026

SUMMARY

At a glance

The website went from a shop window that could not keep its own orders to a complete online store: orders are saved and tracked, customers get receipts, an AI assistant takes orders in Roman Urdu and other languages, and the admin panel now runs the whole business - orders, stock, customers, discount codes, abandoned carts and restock requests. Security was tightened so only the store's admin account can make changes.

Area	What was done	Status
Product photos	Multiple photos per product, phone-style photo editor, zoom/magnifier	Done
Branding	New logo, larger, with shop name	Done
AI assistant	Takes orders by chat in Roman Urdu, Urdu, English and more	Done, tested live
Orders	Saved online, receipts, real tracking, WhatsApp confirmation	Done
Admin panel	8 pages: dashboard, orders, products, inventory, customers, abandoned carts, restock requests, discounts	Done
Customer guide	Step-by-step "How to order" tips in English + Roman Urdu	Done
Discount codes	Create and manage codes from admin	Done
Security & bugs	Admin lock-down, order-spam limit, many bug fixes	Done, rules tested

PART 1

Product photos

Multiple photos per product

- The admin panel accepts any number of photos per product - upload several at once or paste links.
- Each photo shows a small preview; arrows change the order and the first photo is marked **MAIN** (the cover photo).
- Photos stored on the store's Cloudinary account no longer show their web link in admin - they show "Uploaded image" with an **Edit** button. Photos from other websites keep an editable link.

Phone-style photo editor

- **Crop** with shapes (Original, 4:5, 1:1, 3:4, 16:9), drag to move, pinch or slider to zoom.
- **Rotate** left/right, flip, and a straighten slider for tilted photos.
- **Adjust** brightness, contrast and saturation with a live preview; "Skip editing" uploads the original.
- Large photos are shrunk automatically so uploads never fail and pages stay fast.

Product page gallery and magnifier

- Customers can browse all photos with arrows, a "1 / 4" counter, thumbnails and swipe on phones.
- Hovering with a mouse zooms into the photo; a magnifier button opens a full-screen viewer with tap-to-zoom, drag, pinch-zoom and swipe between photos.

PART 2

Branding

- The new bag logo replaces the old one everywhere (navbar, mobile menu, footer, receipts) and is noticeably larger.
- The shop name "TRENDY BAZAAR - PAKISTAN" is shown next to the logo so the brand name stays visible.

PART 3

AI order assistant

- An "**Order with AI**" button on every page opens a chat that answers questions and takes orders.
- It replies in the customer's own language and script - Roman Urdu, Urdu, English, Punjabi, Pashto and others.
- It only uses the live product list and prices, collects name, phone, city and address one step at a time, shows a summary, and finalises only after the customer confirms.
- The finished order is saved like a website order (with an order ID and receipt) and sent to the store's WhatsApp.
- Runs on Google Gemini through a private server function, so the API key is never visible to visitors. If Google is busy it retries and switches to a lighter model automatically.

Tested live: a full Roman Urdu conversation ordered 2 watches, collected all details, showed the summary and marked the order ready only after "haan confirm hai". English and Urdu-script questions were answered in the same language.

PART 4

Orders, receipts and tracking

Orders are now saved

- Before: orders were stored only in the customer's own browser, so the store never received them.
- Now: every order (website and AI chat) is saved in the online database with a hard-to-guess ID such as TB-7K3M9QX.
- If the connection fails, the order is kept on the device and the customer is asked to send it on WhatsApp - no order is lost.

Receipts

- After every purchase the customer sees a proper receipt: logo, order ID, date, items, discount, delivery, total and payment method.
- Receipts can be printed or saved as PDF, shared on WhatsApp, and printed as invoices from the admin panel.

Real order tracking

- Before: tracking was fake - it showed made-up steps as completed.
- Now it shows the true progress with dates: Received, Confirmed, Packed, Shipped, Out for Delivery, Delivered (or Cancelled/Returned), plus courier and tracking number once added.
- Every order has its own tracking link (e.g. /track/TB-XXXXXXX) that can be shared on WhatsApp.

Cash on Delivery confirmation

- After ordering, the customer's main next step is **"Confirm Order on WhatsApp"** - COD orders are dispatched only after confirmation.
- In admin, pending orders have an **"Ask to confirm"** button with a ready message, and orders unconfirmed for 24+ hours are flagged in red.

Checkout fixes

- The confirmation screen used to show the wrong total (often Rs. 0) - fixed.
- Gift-wrap fee and points discount did not match between checkout and the saved order - fixed.
- Phone numbers must be a valid Pakistani mobile number.

PART 5

Admin panel

Page	What it does
Dashboard	Today's and this month's sales, orders waiting for confirmation (with 24h+ warnings), COD money to collect, 7-day chart, stock alerts, recent orders and best sellers.
Orders	Filter by status/date, search, export to Excel. One-click status updates, courier and tracking number, private notes, copy address, print invoice, ready-made WhatsApp messages. Stock and reward points update automatically. Pop-up alert when a new order arrives.
Products	Add and edit products with multiple photos and the photo editor.
Inventory	Quick stock and price edits, low-stock and out-of-stock filters, total stock value, export.
Customers	Customers grouped by phone number with order count, total spent, repeat-buyer tags and WhatsApp button.
Abandoned Carts	Customers who entered their details at checkout but did not order, with a one-tap WhatsApp reminder.

Page	What it does
Restock Requests	"Notify me" requests grouped by product, with a WhatsApp message and product link when stock returns.
Discounts	Create, edit, pause or delete codes (percent or fixed amount, minimum order, expiry, usage limit); choose the one code advertised across the site; usage statistics per code.

PART 6

Guided "How to order" tour

- First-time visitors see a small welcome card: *"Pehli dafa aaye hain? Let us show you how to order in 30 seconds."*
- Tooltip bubbles with arrows walk the customer through search, categories, opening a product, Add to Bag, the bag, the AI chat, WhatsApp ordering and tracking - each in English with a Roman Urdu line, in the store's gold and black style.
- Short tours also appear the first time a customer opens a product page, the bag and checkout.
- A **"How to order?"** button lets anyone replay the guide at any time. Works on phones and computers.
- The 5% promo pop-up now waits until the customer is not busy, so it never interrupts an order.

PART 7

Discount codes and reward points

- WELCOME5 is no longer fixed in the code - all codes are managed from admin, and the featured code appears automatically in the top banner, promo pop-up, bag, footer, shop page and FAQ.
- Customers can only check the exact code they type; expired, paused or used-up codes are rejected with a clear message.
- Reward points: the free 180 points for every visitor were removed. Points now belong to the phone number - 5% back when an order is delivered, redeemed points deducted when the order is confirmed, reversed on cancel/return.

PART 8

Security and reliability

- **Admin lock-down:** only **tbadmin@gmail.com** can change products, orders, points or discount codes. Any other account is refused by the database itself.
- **Order spam protection:** at most 3 orders per phone number in 24 hours, enforced by the database.
- **Privacy:** customers can look up only their own order by its ID; nobody can list other customers' orders, carts or requests.
- **Shareable links:** every page and product has its own web address, links shared on WhatsApp open the right product, and the browser back button works.
- Optional invisible bot protection (Firebase App Check) is built in and can be switched on with a reCAPTCHA key.

Tested: 38 out of 38 security tests passed in Firebase's test environment - including normal ordering, a 4th order in one day, faking the counter, a non-admin account editing products, and customers trying to give themselves points.

Other bugs fixed

- Photo uploads stopped working after selecting files - fixed.
- Error messages appeared behind the photo editor and could not be seen - fixed.
- First-time visitors could see a blank white home page while products loaded - fixed.
- The "Earbuds" tile on the home page showed a watch photo - fixed.
- Two products with the same name shared one link - each now has its own.

PART 9

Going live - checklist

Important: the newest code and the new database rules depend on each other. Publish them back-to-back, otherwise customers will not be able to place orders in between.

#	Step	Where
1	Commit and push the latest code; wait for the Vercel deployment to finish.	GitHub / Vercel
2	Immediately publish the new security rules (firestore.rules) - paste and click Publish.	Firebase Console - Firestore - Rules
3	Add GEMINI_API_KEY (AI assistant key) and redeploy.	Vercel - Settings - Environment Variables
4	Open the admin Discounts page once (creates WELCOME5 automatically).	Website /admin
5	Place one test order, use "Ask to confirm", then mark it Confirmed.	Website + /admin
6	Recommended: turn off public sign-up.	Firebase - Authentication - Settings - User actions
7	Optional: enable App Check with a reCAPTCHA v3 key (VITE_RECAPTCHA_SITE_KEY).	Firebase - App Check / Vercel
8	Restrict or renew the Gemini API key and set a spending limit (it was shared in chat).	Google AI Studio

NEXT

Suggested next improvements

- **Real customer reviews** collected by WhatsApp after delivery (current ratings are typed in manually).
- **Courier integration** (PostEx, Leopards, TCS or Trax) - book parcels and update tracking automatically.
- **Faster images** using Cloudinary's automatic resizing, and loading the admin code separately.
- **Google and social previews** for each product page (title, photo and price when links are shared).
- **Ad tracking** with Meta Pixel and Google Analytics.
- Stock per colour, full Urdu translation, real JazzCash/Easypaisa payments, and staff accounts with limited access.
